BOIL WATER INSTRUCTIONS

State and Local Health authorities recommend that consumers take the following precautions:

(1) Water used for drinking, making ice, as an additive, mixer for all foods and preparing food should be brought to a rolling boil for one minute prior to use.

(2) Another alternative is to drink bottled water, certified for sale by the New York State Department of Health.

(3) Water used to rinse dishes should have two (2) teaspoons of 5% liquid bleach per gallon of water for proper disinfection.

(4) You do not need to take special precautions with recipes in which water is normally boiled; i.e., spaghetti, etc. .

(5) Coffee and tea can be made safely with your water when you boil the water during preparation.

(6) You can safely use your water for bathing and washing clothes.

(7) Water can be used for gardening provided fruits and vegetables are washed with boiled water or water from an approved source before consumption.

(8) Household pets can continue drinking the water since they are usually more tolerant of bacteria. If you have any questions, you should call your pet’s veterinarian.

(9) This advisory applies to all drinking water, drinking fountains and other water sources in offices and other places of business also under the advisory.

(10) Owners of fish in aquariums should consult their pet store because of the extra chlorine being added to your water.

(11) The Boil Water Order covers your water system only.

(12) Individuals who have symptoms of illness may wish to seek medical attention. Please take the above steps to protect your health until further notice.
